

CFSS GLOBAL INTERNSHIP 2026

**Building an AI-Powered
Security Dashboard**

CFSS GLOBAL INTERNSHIP PROGRAM 2026

PROJECT GUIDELINES AND EVALUATION CRITERIA

Dear Intern,

Congratulations on being part of the **CFSS Global Internship Program**. As you embark on this professional journey, you are expected to operate with the mindset of a Cyber Investigator. This project is not just a task; it is a simulation of real-world challenges in Cyber Forensics, Penetration Testing, and Incident Response.

Please read the following guidelines with clinical precision.

1. Ethical Conduct & Confidentiality (NDA)

- **Zero Disclosure:** All project data, case files, and methodologies are **Strictly Confidential**. Sharing any part of this project outside the CFSS ecosystem will lead to immediate disqualification and blacklisting.
- **Integrity:** Maintaining the chain of custody (in forensics tasks) and ethical boundaries (in VAPT tasks) is a core part of your evaluation.

2. Submission Protocols

- **Format:** Submissions must be in a professional **PDF format** only.
- **Evidence-Based Reporting:** Every technical step **MUST** be backed by a clear, high-resolution screenshot. No screenshot = No proof of work.
- **Structure:** Your report should include: *Executive Summary, Methodology, Technical Findings, and Recommendations*.
- **Timeline:** * **Submission Starts:** June 22th, 2026
 - **Hard Deadline:** June 26th, 2026 (11:59 PM)

3. Evaluation & Certification Criteria

To maintain the high standards of **CFSS**, the following scoring system is active:

- **Total Points:** 100
- **Qualifying Marks:** 60 Points (Required for the ISO & IAF Verified Certificate).
- **Evaluation Metrics:** We don't just check the "Final Answer." We evaluate your **Technical Logic, Analytical Depth, and Documentation Quality.**
- **Global Recognition:** Qualified interns will receive certificates officially recommended by **Startup India** and **Skill India.**

4. Elite Recognition & Rewards

We reward excellence. Stand out from the crowd to claim these tiered benefits:

- 🏆 **Top 50 Innovators:** Permanent entry into the **CFSS Hall of Fame.**
- 📜 **Top 100 Achievers:** Formal **Technical Experience Certificate** for your domain.
- 📝 **Top 80 Experts:** Official **Letter of Recommendation (LOR)** signed by the CEO to boost your career prospects.

5. Technical Domain Scope

Interns will be tested across multiple high-demand domains:

- **VAPT:** Web, Network, and System Penetration Testing.
- **DFIR:** Digital Forensics and Incident Response.
- **OSINT:** Advanced Open Source Intelligence and Threat Hunting.
- **Log Analysis:** Interpreting SIEM and system logs for anomaly detection.

 Important Financial & Administrative Note

As per CFSS policy, a nominal **Certificate Maintenance & Processing Charge of INR 178** is applicable **ONLY** upon successful qualification of the internship. This fee covers the global verification hosting and ISO-standard document generation. Your certificate will be issued based on the data provided during registration.

Step into the world of Cyber Security with the right investigator's mindset.

Best Regards,

Internship Coordinator

CFSS India (Cyber & Forensics Security Solutions)

Empowering the Next Generation of Cyber Warriors

*"Don't keep your learning a secret! Share your weekly progress on LinkedIn, tag **CFSS Agency**, and let the world know you are training with the experts.
#CFSSIntern2026"*

Internship Project: Building an AI-Powered Security Dashboard (1 Month)

Company: CFSS (Cyber Security & Forensics Services)

Domain: Full-Stack, Backend, Frontend, Java, AI, ML, Data Science, & Software Dev

Duration: 4 Weeks (Project-Based)

Project Objective

In this project, you will develop a web-based **Security Analytics Dashboard**. The goal is to create a system that can ingest security logs (e.g., network traffic or system logs), analyze them using Machine Learning models, and generate a "Threat Score" to identify potential attacks. This project covers the entire **Software Development Lifecycle (SDLC)** and **Data Science Pipeline**.

Weekly Project Timeline

WEEK 1: Architecture & Data Engineering

- **Objective:** Design the project blueprint and establish the data foundation.
- **Tasks by Domain:**
 - **Backend, Java & Software Dev:** Design the API architecture (using Spring Boot, Node.js, or Python) and define the Database schema (SQL or NoSQL).
 - **Data Science, AI & ML:** Research and source security log datasets (e.g., CICIDS, NSL-KDD, or Kaggle Intrusion Detection sets) and perform data cleaning/preprocessing.
 - **Frontend & Web Dev:** Design the UI/UX wireframes for the dashboard using tools like Figma or directly via React/Tailwind CSS.
- **Deliverable:** System Architecture Diagram and Data Preprocessing Script.
- **LinkedIn Update:** *"Week 1 at CFSS: Architecting 'Project Shield'. Building the foundation for an AI-powered security future! 🛡️ #FullStack #DataScience #CFSS #CyberSecurity"*

WEEK 2: Feature Development & AI Modeling

- **Objective:** Develop core application features and train the intelligence engine.
- **Tasks by Domain:**
 - **Frontend:** Implement real-time data visualizations (Charts.js or D3.js) to display log statistics.
 - **AI/ML/Data Science:** Train an **Anomaly Detection Model** (e.g., Isolation Forest, Random Forest) to identify suspicious patterns in the logs.
 - **Backend:** Develop the User Authentication system (JWT/OAuth) and create secure API endpoints for log ingestion.
- **Deliverable:** A trained ML model (.pkl or .h5) and functional API endpoints.

- **LinkedIn Update:** "Week 2 at CFSS: Integrating AI models with our backend. Turning raw system logs into actionable security insights! 🤖💻 #ArtificialIntelligence #MachineLearning #WebDev"

WEEK 3: System Integration & Security Testing

- **Objective:** Connect the frontend with the backend and secure the application.
- **Tasks by Domain:**
 - **Full-Stack:** Perform end-to-end API integration to display ML model predictions on the Frontend dashboard.
 - **Java & Backend:** Implement **Secure Coding Practices** to prevent OWASP Top 10 vulnerabilities (e.g., SQL Injection, XSS).
 - **ML/AI:** Evaluate model accuracy (Precision/Recall) and fine-tune the "Threat Scoring" logic.
- **Deliverable:** A working prototype of the integrated "Project Shield" suite.
- **LinkedIn Update:** "Week 3 at CFSS: Full-stack integration in progress. Ensuring our security tool is itself protected against modern exploits! 🛡️ #SoftwareEngineering #Java #SecureCoding"

WEEK 4: Deployment & Documentation

- **Objective:** Deploy the project to a live environment and finalize technical documentation.
- **Tasks:**
 1. **Deployment:** Deploy the Frontend (Vercel/Netlify) and the Backend (Render/Heroku/AWS).
 2. **Documentation:** Create a professional **GitHub Repository** with a comprehensive **README.md** including setup instructions.
 3. **Final Report:** Compile a technical PDF report detailing the code architecture, ML results, and security features.
- **Deliverable:** Live Project URL + GitHub Repo Link + Final Technical Report.

- **LinkedIn Update:** *"Project Completed! 🎓 Successfully built and deployed 'Project Shield' with **CFSS**. A full-scale AI-powered security analytics suite! Check out my GitHub repo. #DevLife #CFSSInternship #DataScience"*

Submission Guidelines for Interns:

- 1. Format:** All screenshots and logs must be compiled into a single PDF.
- 2. Tagging:** For every LinkedIn post, tag CFSS Agency and use the hashtag #CFSSIntern2026.
- 3. No Plagiarism:** Any intern found using screenshots from the internet will be disqualified.
